PCR's High Wealth Data Set™ grows 15% in third quarter

WILTON, CT, November 11, 2007 – Private Client Resources, LLC (PCR) announced today another 15% growth in the size of the High Wealth Data Set™ to \$13.3 billion. This is the second quarter in a row of 15% growth. This growth was driven by a 20% increase in the enrollments of high wealth clients for three private banks and the recent rollout of PCR Insight™ by an additional trust company. The High Wealth Data Set™ is a database containing the complete wealth picture of high wealth clients.

The High Wealth Data Set™ is used to produce *High Wealth Standards*; a unique publication examining the trends and allocations of the high wealth community. For the first time, peer group benchmarks, data standards and evidence based advice are available to high wealth financial advisors and private banks.

PCR serves as a veil in the high wealth market by collecting data from custodians and other record keepers, normalizing the data and providing daily consolidated reports to the high wealth financial advisors or private banks.

About Private Client Resources

Private Client Resources LLC (PCR) is an information company focused exclusively on the high wealth community. Its chief service is to provide secure, accurate, consolidated

and timely data to the family office or advisor each day. This service gathers all asset information including tax lots, employee benefits, insurance, hedge funds and alternative investments. PCR gathers data manually and electronically at the transaction level, normalizes, reconciles and publishes it daily.
